Sempre’s **Connected Construction Assessment** is designed to help your housebuilding or construction company enable better collaborative working, streamline business processes and utilise data as an asset to drive change in post-COVID recovery. That change is delivered through developing a truly connected view of data across the business to understand:

### Connected Enterprise
How truly connected your enterprise is and how you fare compared to your industry peers.

### Information Bottlenecks
Where your information bottlenecks are and what negative business impact they are having, for example on customer satisfaction, health & safety and procurement.

### Data Efficiency
To find the real opportunities to drive efficiencies and smarter working with data.

THOUGHT-PROVOKING ENGAGEMENT:

This thought-provoking, free of charge engagement kicks-off with a half-day workshop with Paul Scales, Sempre's Housebuilding & Construction Industry Lead, and the appropriate representatives from your organisation.

WORKSHOP OBJECTIVES:

1. Map and review your current application and data landscape.
2. Audit your existing application integration and application lifetimes.
3. Identify any current difficulties, frustrations and limitations of the existing architecture.

WORKSHOP FOLLOW UP:

Within one month of the workshop, Sempre will document the findings and, using their industry knowledge and experience helping other housebuilding and construction companies, present you a roadmap to deliver "Connected Construction" to your organisation, including:

1. A target architecture that provides the capabilities to deliver the identified business objectives and strategies in line with providing a "Connected Construction" outcome.
2. Gap analysis between your current state and desired future state, prioritising those that will deliver the most value to your organisation.
3. A proposed set of initiatives that would help address those identified gaps.
This is a no-obligation, half-day consulting engagement with Sempre. We would hope to have demonstrated our expertise and experience in helping organisations like yours achieve their desired future state to meet their strategic goals, and therefore that you will choose to work with us in putting the proposed initiatives in place. There is, however, no requirement to do so. Along the same lines, Sempre reserves the right to decline delivery of a Connected Construction Assessment if we feel we are not the best organisation to help you on your journey.

The workshop is run by our Industry Lead for Housebuilding & Construction, Paul Scales.

[www.linkedin.com/in/pacscales/](http://www.linkedin.com/in/pacscales/)

In his role as Housebuilding & Construction Industry Lead at Sempre, Paul helps our customers transform their organisation through digitising information, connecting data, and better utilising applications and data assets to increase business capabilities.

Over his eight years in this sector, Paul has worked with many of our customers, including Laing O'Rourke, CALA Homes, Countryside Properties, Crest Nicholson and Aspire Defence Capital Works.

Paul's combination of industry experience and technical expertise ensures he brings a pragmatic and analytical approach to converting data into insight to augment decision making, support better planning and deepen understanding of business performance.
