

Motio is now in the Cognos Box!

Sempre Analytics are pleased to announce that Motio has recently publicised that their products are now “In the Cognos Box!”

With many years of experience as a Motio partner, Sempre consultants have the skills and knowledge to ensure your team gain the most from the Motio products. Whether you just require version control for peace of mind, or regression testing of all content, Sempre can guide you through the process and ensure the optimal running of your Cognos environments.

What does that mean?

Every Cognos user who upgrades to Cognos 11.1 will receive a free copy of MotioCI and MotioPI Professional to help them evaluate their process!

Why Motio software

Because Motio software is designed to enhance development and administration processes for Cognos, it's a natural for upgrade projects - helping to reduce effort, time and money expended. Motio solutions have improved Cognos upgrades by:

- Reducing scope by identifying invalid, duplicate and unused content that should not be migrated into a new environment.
- Minimizing time and effort through automated testing to validate that applications behave as expected in the upgraded environment.
- Providing version control to safeguard against needing to recreate content to mimic a previous version, or content that gets deleted through version control.

Using Motio during an upgrade increases the efficiency of the project, ensures that the quality and accuracy of your Cognos assets are maintained in the new environment and puts the powerful new features of Cognos Analytics 11.1 into the hands of the user community faster.

How do Motio products help me upgrade?

Define the scope of the upgrade prior to beginning, so you can determine which content is invalid, duplicate, and unused. This content should not be moved to Cognos 11.1!

- Freedom to delete- freely delete Cognos content that won't make the upgrade, but with the safety of knowing version control can recover anything you may need.
- Save time through automated testing, which ensures your content will behave as expected in the upgraded environment.
