

IBM TM1 to IBM Planning Analytics

TOP 5 REASONS TO UPGRADE

You love IBM TM1! So why upgrade?

Because we listened to TM1 users around the world and put everything we learned into its successor—**IBM Planning Analytics**.

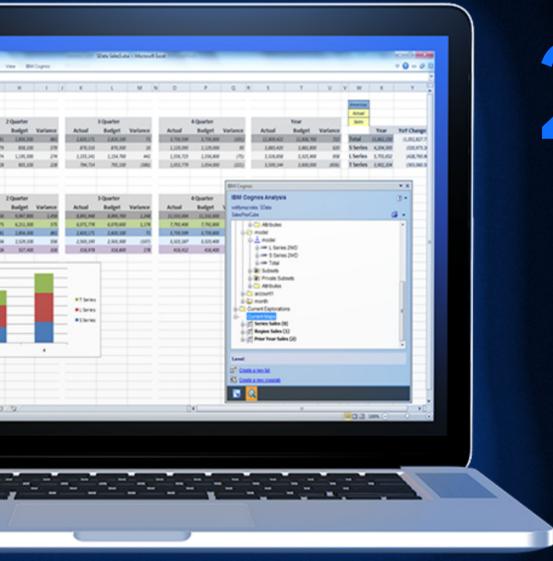

This is one of the most powerful, flexible, and easy-to-use solutions for planning, budgeting, forecasting and analysis on the market. And it's deployable on premises or on the cloud.

Here are 5 great reasons to upgrade

1 WORKSPACE

IBM Planning Analytics Workspace is the new face of TM1. It supports reporting, analysis and write-back with a viewer that makes it easy to navigate multi-dimensional cubes and share results with others.

Workspace includes **more than 25** different charts, maps, scorecards, images and videos to **create compelling visualizations with ease**.

2 EXCEL INTEGRATION

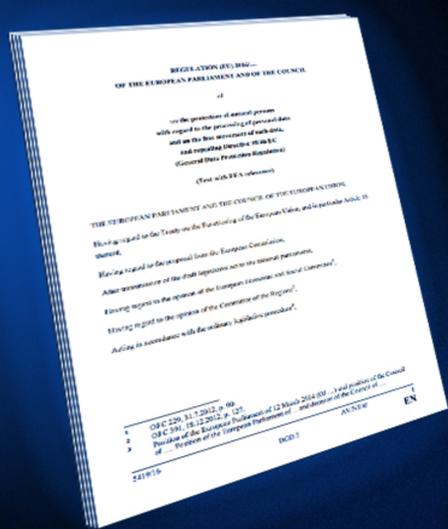

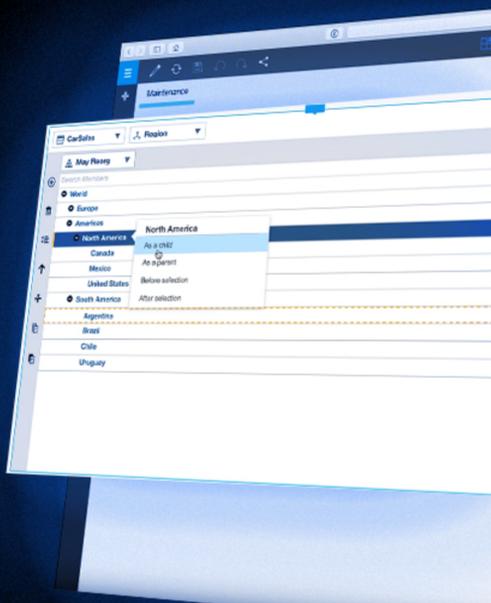

Enjoy Microsoft Excel access to your IBM TM1 database with superior performance over wide-area networks.

This add-in lets you retain functionality and formatting when moving data between TM1 and Excel, and it integrates smoothly with Workspace, sharing a common UX, Cube Viewer, and Set Editor.

3 HIERARCHIES

This capability provides both technical advantages and business-user benefits. It gives you the flexibility to **perform more in depth, granular analysis**, exploring data by attributes such as customer, product, sales program, financial instrument and more.

You can model attributes and drill into them without having to create a new dimension or add elements (members) to the hierarchy.

4 GDPR READINESS

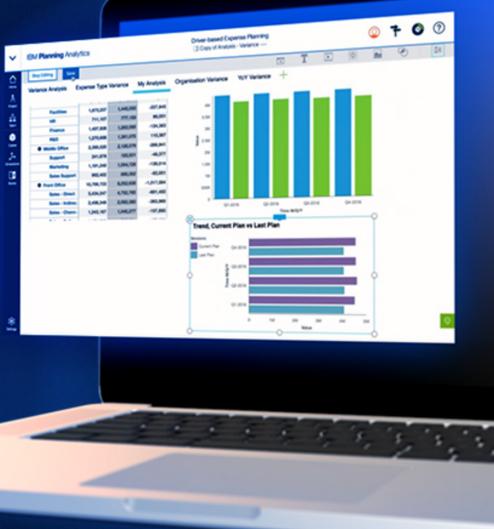

Are you ready for the European Union's General Data Protection Regulation (GDPR)? It takes effect May 25, 2018. And it's critically important that all of your business processes are ready. Upgrading to IBM Planning Analytics is an essential step. **The solution will be ready when the regulation takes effect.**

Learn more at the IBM GDPR web page: <https://www.ibm.com/data-responsibility/gdpr/>

5 EASY INSTALL

Upgrades are a headache, right? Nope, not here. In spite of the solution's new name, this upgrade process is not really a migration.

You just install and go, using your current model and mode of operation.

Why wait to enjoy more capabilities and better performance?

Visit the IBM Planning Analytics website to learn more about why this is one upgrade that's too good to postpone!
